Anemia in dogs

- The possible causes of anemia in animals can be:
 - Loss of red blood cells due to:
 - Hemorrhage
 - Parasites (*Babesia canis*)
 - Autoimmune processes
 - Impaired liver and/or renal function
 - Nutrition mistakes (deficiency of protein and other nutrients, impaired iron absorption, etc.)
- Symptoms of the disease include: general weakness, lethargy, pale gums, rapid breathing and heart rate

HemoVet

Indications

- For dogs with clinical signs of anaemia

Content

- Heme iron, copper, folic acid, vitamin C, Vitamin B6, Vitamin B12

Dosage

- 1 tablet per 10 kg body weight

Packaging

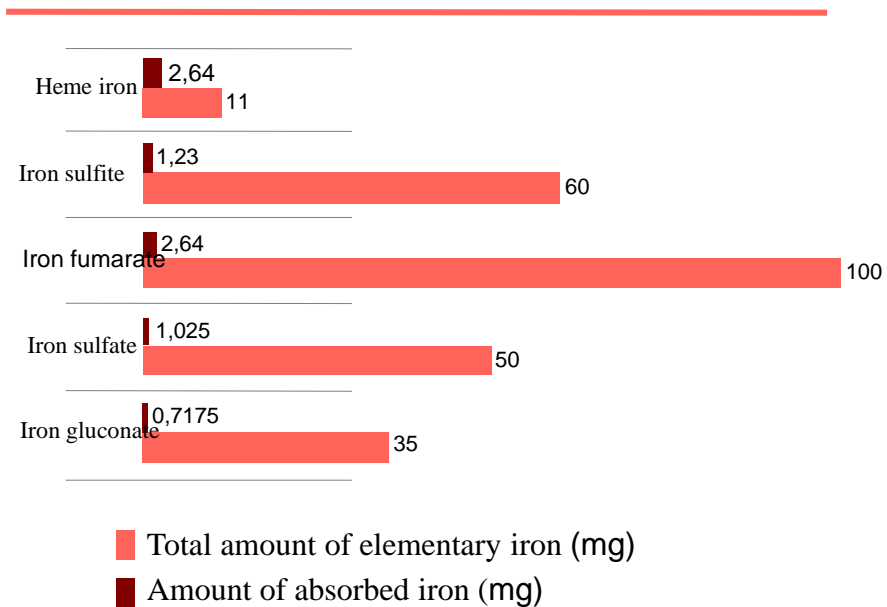

- 60 tablets (4 blisters 15 tablet each)

HemoVet

Total and absorbable amount of elementary iron

Source: Hunt J, Roughead Z., Adaptation of iron absorption in men consuming diets with high or low iron bioavailability, *The American Journal of Clinical Nutrition* 2000; 71(1): 94-102

- **The first** product supporting red blood cells production in dogs and cats
- **Ideal composition** contains all vitamins and micro- and macroelements directly involved in processes related with red blood cells production:
 - Heme iron
 - Copper
 - Folic acid
 - Vitamin C
 - Vitamin B6
 - Vitamin B12
- **Best source of dietary iron – absorption of 26% of administered dose**

HemoVet - summary

- Supplement (complementary feed) for dogs with clinical signs of anaemia
- A source of highly absorbable iron
- Assists with the production of hemoglobin and myoglobin necessary to carry oxygen
- Stimulates the production of red blood cells
