Vet Expert Dermatitis Dog – features and benefits

Properties	Benefits
Protein	The food contains one source of protein, salmon, which helps prevent the presence in food of other protein allergens, which could cause the symptoms.
Omega-6 fatty acids	Increased content supports the functions of the skin and improves the quality of fur by supporting the skin barrier and it protects from the filtering through of environmental allergens into the body.
Omega-3 fatty acids	Protect from the negative effects of inflammatory conditions of the skin.
Fructo oligosaccharides (FOS), mannan - oligosaccharides (MOS)	Prebiotics used by the bacteria of the gastrointestinal tract. They ensure the stability of the intestinal microflora, provide cells of the colon with energy and stimulate the immunological mechanisms in the gastrointestinal tract.
Yucca Schidigera	Extract of Yucca Schidigera has the ability to absorb metabolites in the lumen of the gastrointestinal tract.
Ginger	The addition of ginger stimulates the peristalsis of the gastrointestinal tract and has protective and anti-inflammatory effects.
