GeriatVet 415mg / GeriatVet Large Breed 900 mg

GeriatVet

GeriatVet Large Breed

Geriativet/Geriativet Large Breed

❖ Indications:

For geriatric dogs due to its age dysfunctions. Containing bioactive substances necessary for preventing them from health disorders.

❖ Content:

glucosamine, β -1,3/1,6-Glucan, L-carnitine, lutein, HMB, Omega 3, Alpha-lipoic acid.
Triple dose for Large Breed.

❖ Packing:

- 45 caps /pack
- 20 packs/ box

❖ Dosage:

Geriativet - 1 tabl/5 kg body mass

Geriativet Large Breed – 1 tabl/15 kg body mass

Indications:

For geriatric dogs which due to its age have increased requirement for the bioactive substances necessary for preventing them from health disorders.

Ingredients in 1 tablet:

	<u>GeriatiVet</u>	<u>GeriatiVet Large Breed</u>
• Glucosamine	25 mg	75 mg
• β -1/1,6-Glucan	75 mg	225 mg
• L-carnitine	50 mg	150 mg
• Lutein	10 mg	10 mg
• HMB	150 mg	450 mg
• Omega 3	100 mg	300 mg
• Alpha-lipoic acid	5 mg	15 mg

Properties and usage:

- **Glucosamine** is one of the best known chondroprotectives which helps to decrease degenerative changes in joints in older dogs suffering from *osteoarthritis*. Additionally glucosamine helps to preserve the proper function of urinary tract epithelium what decreases the occurrence of chronic UTI in dogs.
- **β -1,3/1,6-glucan** isolated from *Sacharomyces cerevisiae* cell wall is a polysaccharide with specific cell wall structure which is recognized by immunological system resulting in immune reaction development. As a result the non-specific immunity develops and an animal is better prepared for defense form viral or bacterial infections.
- **L-carnitine** plays a key role in long-chain fatty acids metabolism and energy production. That is why it is necessary for the proper function of heart muscle, especially in older dogs, which are at risk of cardiomyopathy. Additionally, by improvement of fat burning within cells L-carnitine may preserve animal from gaining of body weight or facilitate body weight reduction.
- **Lutein** may increase immunity in dogs by stimulation both humoral and cellular immunological responses. Additionally due to its antioxidant properties and ability to filtrate the high-energy blue light it preserves the retina from degeneration.

Properties and usage

- **HMB** as a calcium salt of 3-hydroxy-3-methylbutyrate is a natural derivative of amino acid leucine. HMB protects the skeletal muscle cells from destruction and facilitates the preservation of muscle mass in older animals prone to muscle wasting. HMB supports the protein synthesis in skeletal muscle and helps to prevent the animal from muscle wasting of any reason.
- **Alpha-lipoic acid** –as a strong antioxidant preserves nervous system cells for harmful free radicals. Thanks to this it diminish the signs of brain aging in dogs.
